

Selected Energy Data – Mount Ascutney Region and Cavendish

Introduction

Efficiency Vermont has collected a variety of data that reflects energy demand at the local and regional level, as well as information on the number of households and businesses taking advantage of its energy efficiency incentives. Selected data from the past three years is presented below. Regional data includes total electricity consumption by sector as well as electric vehicle registrations. Town data also includes a summary of local uptake on a variety of efficiency programs; note that data for some programs was not collected for each of the three years. It is important to note that electrification in the thermal and transportation sectors improves overall energy efficiency and contributes to a reduction in greenhouse gas emissions (because of Vermont’s heavy reliance on electricity from renewable sources), even though electricity consumption is increased. It is therefore anticipated that overall electricity usage will increase as thermal and transportation energy sources switch from fossil fuels to electricity.

Mount Ascutney Region & Cavendish Electricity Usage

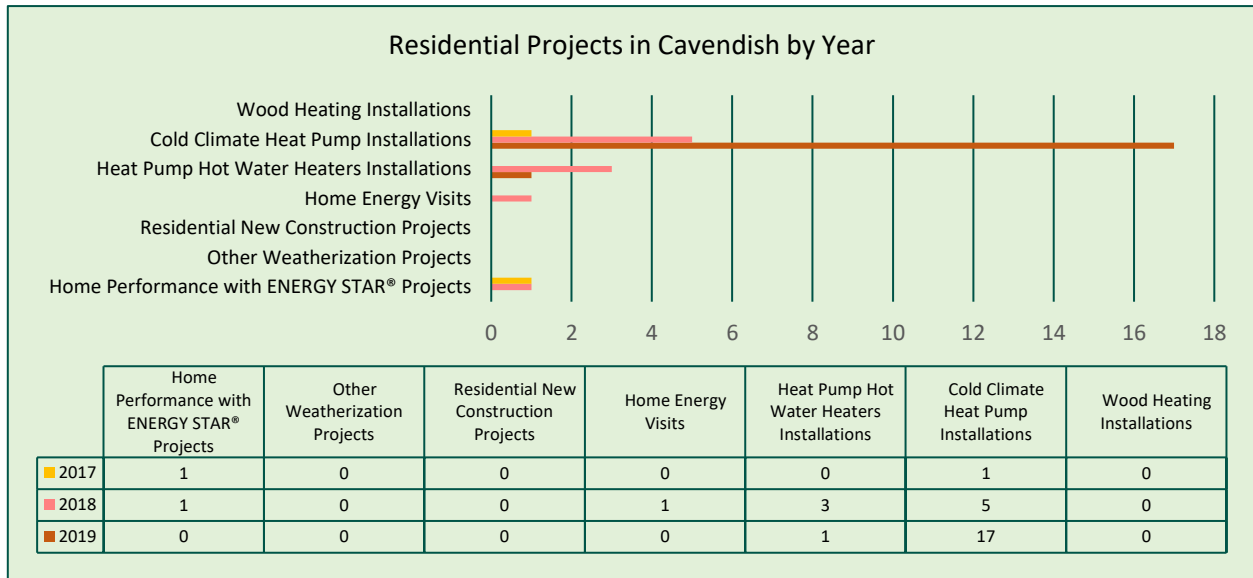

Electricity usage in both Cavendish and the region dropped in 2019 when compared to prior years. While residential and commercial & industrial usage have remained relatively equal in the region, Cavendish’s usage drop in 2019 was due in large part to a drop in commercial & industrial usage.

Selected Energy Data – Mount Ascutney Region and Cavendish

Participation in Efficiency VT Programs

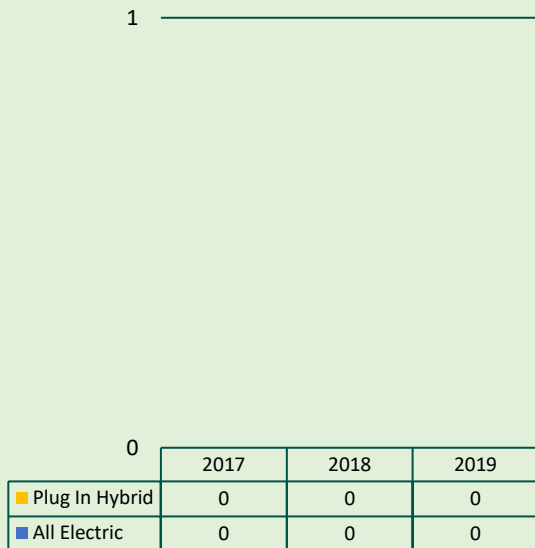

The most popular residential energy efficiency project in Cavendish by far has been cold climate heat pump installations. The low number of Cavendish residents who have taken advantage of Efficiency Vermont’s free home energy visits between 2017 and 2019 may point a way forward to more widespread use of Efficient Vermont programs and incentives. Home energy visits are designed as a first step to help residents determine what projects and incentives are right for them and could be promoted further in Cavendish to increase awareness of offering from Efficiency Vermont and others.

Electric Vehicle and Plug in Hybrid Registrations

Electric Vehicle Registrations in Cavendish by Year

In Vermont, the transportation sector accounts for more greenhouse gas emissions than any other. Electrification is one key strategy to cutting these emissions. Across the region, adoption of electric and plug-in hybrid vehicles has been slow relative to the goals set out in the State’s Comprehensive Energy Plan. Cavendish is no exception with no plug-in hybrid or all electric vehicle registrations as of 2019.

Electric Vehicle Registrations in the Mount Ascutney Region by Year
